Claims 1-25 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. There are two critical aspects of this invention that may make this device inoperative.

1) The Stirling engine starts out at the vertical position with about 90 degrees angle to the horizontal plane as shown in figure 1A. At this position, no matter if the piston keeps moving up and down, there is no force in the horizontal direction to cause the cylinder of the engine to rotate. Figures 1C and 1D show the same problem because the cylinder is at the vertical position.

2) It does not seem like the output force can be transferred to the output shafts because even if the cylinder rotates, the pivot clamps moves, not the shafts. If both move at the same time, it's difficult for the cylinder to rotate.

Claims 1-25 are also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a well asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Parr, Dibrell et al, Hsiao, McClung disclose walking beams with Stirling engines.
